MTSI - Driving on the Right Side of the Road

Driving on the Right Side of the Road

Young drivers between the ages of 15 and 20, comprise 6.5% of the licensed population and too often are amongst the high number of Texans injured or killed due to speed, DUI, failure to wear a seat belt and other poor driving habits.

Motor vehicle crashes are the leading cause of death of 15-20 year olds. NHTSA reported that 23% of the young drivers between the ages of 15 and 20, who were killed in crashes, had a BAC of .08 or higher.

Driving on the Right Side of the Road is a project aimed at social studies teachers at the elementary, middle and high school levels that is possible through a collaborative effort with the Texas Municipal Courts Education Center and [Law Focused Education Inc.](#) (LRE) a Department of the State Bar of Texas and funding through the Texas Department of Transportation.
